CURRENT PROJECTS

Determination of exoplanet melting curves, crust compositions, and volatile solubility (2015–current)

- Piston-cylinder experiments to identify location of the dry solidus in mantles of exotic composition
- Piston-cylinder experiments to measure the solubility of volatiles in primitive silicate mantles

Diffusion chronometry using Fe-rich clinopyroxene from Yellowstone post-caldera rhyolites to determine rejuvenation-eruption timescales of high-silica systems (2014–current)

- Developed new diffusion modeling method to use a slow-diffusing elemental profile as a proxy to the initial condition of a fast-diffusing elemental profile
- Analyses via LA-ICPMS, EPMA, SIMS, NanoSIMS (also operated)
- Finite differences diffusion model programmed in Python
